

BCH 6744- Fall Semester 2017: Molecular Structure Determination by X-ray Crystallography

Instructors: Dr. Robert McKenna (Lectures) & Dr. Mavis Agbandje-McKenna (Labs).

Credit: 1 or 2 hours

Course Description:

The objective of the course is to provide detailed theoretical and practical instructions on the methodology of X-ray crystallography, a biophysical technique at the forefront of research efforts aimed at structure-function elucidation of macromolecules. Students will learn the theory behind the technique of X-ray crystallography and will apply the knowledge obtained to the three-dimensional structure determination of a macromolecule (carbonic anhydrase). The laboratory class will provide practical experience in sample preparation, operation of the instrumentation, data acquisition, data analysis, phasing and refinement. The anticipation is that students will take both the theoretical and practical sections of the course for 2 credits, which will run concurrently. However, students may earn 1 credit by either attending the lectures on the theory of X-ray crystallography or the laboratory class. This hands-on approach will reinforce the applicability of this methodology in the analysis of the functional properties of a biological macromolecule.

Times and Places:

Lectures (L): Held Mondays (M), Wednesdays (W) and Fridays (F), 9th period (4:05 to 4:55 pm) in CG-41.

Laboratory practicals (P): Held Thursdays, 4th to 6th period (12:50 to 3:50 pm) in LG-171.

Prerequisites:

BCH 6740 or equivalent or consent of instructor.

Recommended Text:

Tests and Grading:

Lecture component will be graded based on a take home problems and a final take home exam. Laboratory component grade will be 30% homework and 70% completed lab. project report written in the form of crystal structure manuscript (Acta Cryst. D format).
